

Regression Testing

Best Practices Workshop, March 25-26 2019, Hampton VA

Carlos Cruz
Jules Kouatchou
Brent Smith

NASA GSFC Code 606/610 (ASTG/GMAO)
Greenbelt, Maryland 20771

What is regression testing?

The purpose of regression testing is to confirm that a recent program or code change has not adversely affected existing features.

When do we do it?

Whenever we make a change.

How do we do it?

There are various ways:

- Re-run existing test cases
- Exploratory testing
- Automated execution and assertion of acceptance criteria

Aim for maximum code coverage

Example: GISS modelE

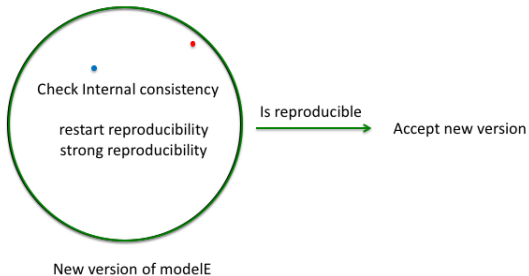

modelE baseline

*<https://www.giss.nasa.gov/tools/modelE/>

- Other recommendations¹:

- Test with multiple compiler vendors
- Multiple modes (serial and MPI)
- Multiple NPEs

Results

Regression testing of modelE E2.1_branch
 Repository: /discover/nobackup/ccru/devel/modelE.clones/simplex/E2.1_branch
 Branch: E2.1_branch -- Build type: release
